

# M 1000

A high-quality Finnish product for heavy and demanding use

The durable and compact M 1000 for professional and semi-professional use

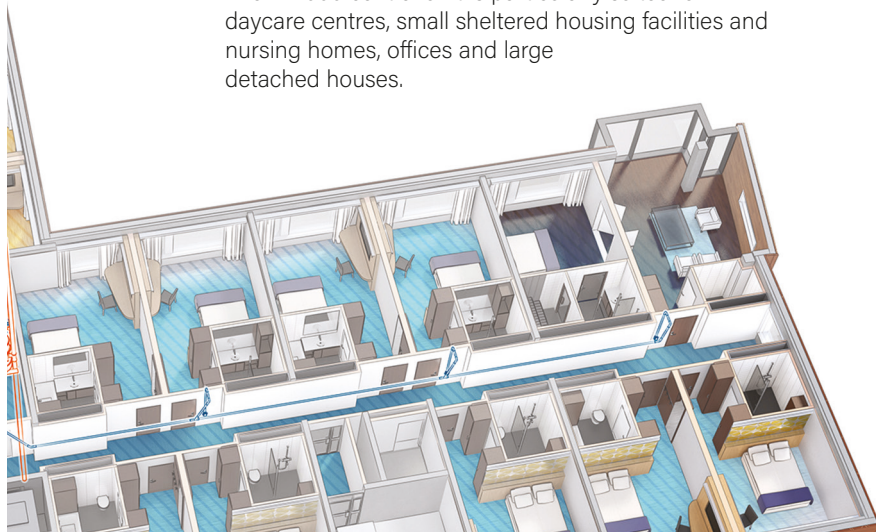

Further information at  
[www.allaway.com](http://www.allaway.com)

## Designed for heavy use

The M 1000 is a central vacuum cleaner designed for heavy professional and semi-professional use as well as for large detached houses and villas in which the cleaned areas are large and the amount of usage hours is high. Thanks to its compact size, the M 1000 is well suited for small installation spaces.

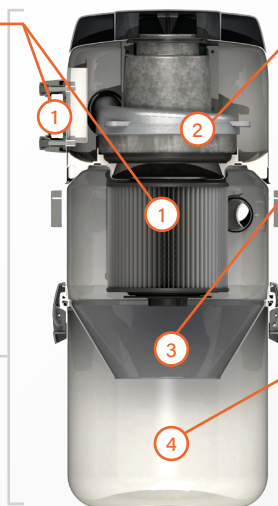

The M 1000 central unit is particularly suited for daycare centres, small sheltered housing facilities and nursing homes, offices and large detached houses.

## Main features of the new M 1000

The M 1000 is equipped with two filters: a **carbon dust filter** and a **polyester filter** which protects the machine's motor even in heavy use

A durable design with a steel shell

A **soft start feature**, which protects the motor by starting it gradually

A **cyclone cone** keeps the rubbish down in the dust canister and extends the filter's service life and maintenance interval

A **20-litre dust canister** that can be used with or without a dust bag according to the user's wishes

## A high-quality carbon dust filter

Filters fine motor dust while keeping the installation space clean.

- Changing interval 200 h
- Filtration class F7

## Steel wall bracket

The M 1000 central units are delivered with a sturdy steel wall bracket that is suitable for all wall structures. The M 1000 is secured to the wall bracket with a quick-release locking system.

## A large, 20-litre dust canister

The dust canister has a handy quick-release locking system; when opened, the canister hangs safely on the locks, allowing the user to remove it for emptying. The M 1000 can also be used with a dust bag.

## Technical specifications

- Operating voltage min.–max. 207–244 V (50 Hz)
- Electrical power max. 1600 W
- Low pressure max. 37 kPa
- Air power max. 672 W
